

"EV Power - Lab 4 Project Report"

Chosen Question: Has overall renewable energy use increased year over year across U.S. states?

Methods were combining datasets into ones like `renew_all`, `energy_summary`, and `price_long`, which allowed me to generate this graph and other analyses.

I notice that year over year total renewable energy use is increasing, and there seems to be a pretty clear state that is a large portion of these amounts (California). This answers my question, but I would be curious to see other information like which states contribute most to this growth, and which states may be declining.

**R was being odd and unable to render a pdf or even an html file so I did this manually separately*
